

## Allied Technologies Australia

Over the last few years, there has been a dramatic increase in the deployment of secure small and large networks by Government agencies including the Department of Defence, Army, Navy and Air force and other federal departments and agencies. In addition, several other high-assurance networks and secure facilities have been designed and constructed throughout the state and local government as well as the commercial industry. All for the purposes of research and development, systems integration, federal outsourcing, disaster preparedness/recovery, continuity of operations and emergency management.

The network solutions offered by Allied Technologies provide yet another layer to the KLM Group high-value portfolio of services. Allied Technologies has an unparalleled offering ensuring information confidentiality, secure network requirements and a high level security of network and facility installations.

Allied Technologies were recently contracted to design and construct the electrical, data communications for the technologically advanced Joint Combined Training Capability

facility at Shoalwater Bay Training Area, Central Queensland for the Department of Defence. This new capability gives Australian and United States defence personnel an advanced training system to better prepare for joint (Navy, Army, Air Force) combined (Australia and US) operations in increasingly complex environments.

Allied Technologies assisted in providing a state-of-the-art learning facility to include the establishment of secure persistent connectivity, an environment that links selected live, virtual and constructive simulation systems and information systems to support planning, conduct and evaluation.

Solutions offered by Allied Technologies to deliver secure communications infrastructure include structured cabling and connectivity designed for high assurance network deployments and highly classified areas. Where required by site, underground fibre optic cable and conduit installation is undertaken using trenching or directional boring.

*Allied Technologies address the design and implementation of infrastructure requirements related to critical networks, enabling secure communications and continuity of operations.*

*Industry leaders in data, voice and video communications network design, Allied Technologies hold numerous specialist accreditations including - ISO-9001, WOGTA, membership of the defence industrial security program and a federal government endorsed supplier.*
